

## IPO Chart MathTutor

Input	Processing	Output
- Two random numbers (1–10)	- Randomly generate two numbers using the Random class.	Display a math problem (num1 operator num2).
- A random operator (+, -, *, /)	- Randomly select an operator.	Prompt the user for an answer.
- User's answer	- Compute the correct answer using the chosen operator.	If the user answer = correct answer → "Correct!"
	- Compare user answers to correct answers (allowing tolerance for division).	Else → "Incorrect. The correct answer is ..."
